

CONTENTS

P. AUGUSTYNIAK: Determination of the diagnostic parameters of an electronystagmogram using signal filtration in the time-frequency domain and adaptatively selected characteristic.	7
E.V. BUDILOVA, J. KOZŁOWSKI, A.T. TERIOKHIN: Neural network models of life history energy allocation	13
M. BUŚ, J. FYDA: Optimal size and the length of cell cycle in the ciliate <i>Euplotes sp.</i> (Protozoa) - theoretical model.	19
Z. DENKOWSKI, S. MIGÓRSKI: Optimal control problems for a mathematical model of artificial heart.	25
U. FORYŚ: Global analysis of Marchuk's model of an immune system in some special cases.	31
M. GÓRKIEWICZ: Seeking after methods for finding diagnostic rules case study from clinical practice.	37
I. KOPOCIŃSKA, B. KOPOCIŃSKI: Statistical analysis of the probability distribution function of gene size.	43
A. KWIATKOWSKA, J. SIKORA: Noise reduction in electrical impedance tomography using the fuzzy logic theory.	49
J. MARTYNIAK: Cluster analysis - anticipating neurotherapeutical results.	56
P. OLEJNICZAK: Allocation of resources to vegetative and sexual reproduction in plants - a dynamic optimization model.	62
W. J. PAWŁOWSKI: Computer simulation of growth of a spruce stand - application of the PICEAT model.	68
W. PODRAZA, B. GONET: Rough sets approach to analysis of relapse risk factors of acute lymphoblastic leukaemia in children.	74
M. SKOWRONEK, I. ROTERMAN, L. KONIECZNY, B. PIEKARSKA, B. STOPA, J. RYBARSKA: Computational techniques in studies of liquid crystals and their biological applications.	76
A. STANISZ: The mathematical model of autoimmune disease.	82
H. STANUCH, M. TRYSTUŁA: Logistic regression applied to selection of variables affecting survival in patients with acute pancreatitis.	88
W. SZELIGIEWICZ: Consequences of neglecting density - dependent effects in models of phytoplankton dynamics.	91
A. TOFILSKI: When should honey bee (<i>Apis mellifera</i>) colonies swarm?	96
J. UCHMAŃSKI: Individual-based modelling in ecology: its assumptions and properties.	101
M. WOŹNIAK: Multistage decision making in the sequential medical problem.	107
J. WTOREK, A. POLIŃSKI, J. SIEBERT: A method of an electroimpedance and its changes calculation for medical and biological purposes.	113
M. ZIÓŁKO, J. PIETRZYK, P. SYPKA: Compartment models of hemodialysis.	119
