

CONTENTS

Jerzy Białas: Wavelets Application in Coding Image Profiles	9
Andrzej Bielecki: A Neuronal System for Simulation of Consciousness Dynamics Based on Information Metabolism Theory	15
Marek Bodnar: On Some Integro-Differential Models with Delay in Population Dynamics	21
Piotr Boguś, Janusz Jakitowicz: Analysis of EEG Signals with Deterministic Chaos Methods	27
Aleksander Chmielowiec, Andrzej Skorupski: A Hierarchical Neural Network for Spectral Analysis of Heart Rate Variability	33
Antoni L. Dawidowicz, Jerzy L. Zalasinski: Model of Plant Fertilization by Bees	39
Urszula Foryś: Time Delays in Avascular Tumour Growth	45
Paweł Holas: Application of Dynamic Systems Theory in Current Psychology	51
Paweł Hoser: Density Estimation of Probability Distribution with Smoothing Transformations	55
Dariusz Jabłoński: The Shadowing Property of a Perturbed Linear System and Applications to a Weakly Nonlinear Neuron	63
Jerzy Janecki: A Computerised Graphic Method for the Extraction of a Gaussian Part from the Gaussian-Like Distribution and its Application in a Medical Laboratory	67
Agnieszka Janiak – Osajca, Anna Timoszyk: Application of Topological Methods and ¹ H-NMR Technique in Description of Biological Cell Fusion	73
Anna Kabala, Piotr Kalita: Application of Thin Shell Theory for Modelling Dynamics of Arterial Walls	79
Renata Kalicka, Anna Pietrenko: Biomedical System Parameters Estimation on the Base of Impulse Response Using Correlation Functions Method	85
Dariusz Kayzer, Andrzej Kędziora, Krzysztof Moliński: Water Transport Trend Model in Agricultural Landscape	91
Andrzej Kokoszka: Dynamical Systems Theory in Psychotherapy	97
Ilona Kopocińska, Bolesław Kopociński, Anna Okulewicz: Probabilistic Models Applicable to the Description of the Number of Nematodes Parasitizing the Birds	103
Przemysław Korohoda, Józef Suliński, Przemysław Sypka: Estimation of Soil Temperature in Summer Period	111
Mirosław Lachowicz: When Topology Meets Medicine	117
Małgorzata Muc-Wierzoń, Barbara Zubelewicz, Janusz Wierzoń, Adam Sterno, Teresa Kokot, Ewa Nowakowska, Andrzej Kozowicz: Mathematical Modelling of TNF α Biological Action and Its Soluble Receptor	123
Edward Oczerecko: Fractal Dimension – from Hausdorff Definition to Practical Applications in Medical Image Analysis	129
Maciej Paszyński: Calculations of Blood Flow in Arteries – Comparison of Fluid Particle Model with Finite Elements Methods	135
Maciej Paszyński, Andrzej Pele: Simulation of Phenomenon of Energy and Mass Transport in Artery	141
Andrzej Polański, Marek Kimmel, Andrzej Świerniak: Stability of Population Dynamics Models with Selection and Segregation Distortion	147
Sylwester Smolik: A Model of Seasonal Dependence of Births in Poland	153
Cezary Stępień: Self-Congruency of Models of Branched Plants	161
Andrzej Świerniak, Jarosław Śmieja, Marek Kimmel, Joanna Rzeszowska-Wolny: Modeling of Telomere Shortening – Control Theoretic Approach	167
Adam Źuchowski, Bogdan Grzywacz: Modelling of Dynamics of Growth for Coexisting Populations of the Type “Food Producer – Food Consumer” and “Food Producer – Food Producer”	173
