

Table of Contents

Part I: Invited speakers

Leonora Bużańska, Marzena Zychowicz and Krystyna Domańska-Janik: Stem cell developmental processes on biofunctional domains <i>in vitro</i>	9
Maria Wideł: Mutual signaling between ionizing radiation exposed and non exposed cells: potential impact on cancer radiotherapy	11
Dariusz Wrzosek: Predator-prey interactions and morphogenesis — classical biomath problems and new challenges	13

Part II: Full papers

Antoni Leon Dawidowicz and Jerzy Leszek Zalasieński: Mathematical model of ionic pump (Na^+ / K^+ - ATP-ase)	17
Paweł Gołąb: Epidemics in scale-free networks	22
Roman Jaksik, Michał Marczyk, Joanna Polańska and Andrzej Polański: Microarray artifacts elimination algorithm based on image recognition techniques	29
Mikhail Kolev: Numerical modeling of cancer invasion	34
Mateusz Kopacz: A mathematical model of chemoradiotherapy	41
Magdalena Malina and Małgorzata Bogdan: Logic regression based methods in application to quantitative trait loci (QTL) data analysis	47
Jakub Pękalski, Savas Tay and Tomasz Lipniacki: Stochastic switching of NF-κB system	54
Kazimierz Piechór: A simplified mechano-chemical model of buffered calcium waves	60
Monika Joanna Piotrowska, Urszula Foryś and Marek Bodnar: Delayed logistic equation with treatment function	66
Jan Poleszczuk, Urszula Foryś and Monika Joanna Piotrowska: New approach to anti-angiogenic treatment modelling and control	73
Krzysztof Psiuk-Maksymowicz and Damian Borys: Computational study of vascular tumour growth in situ	79
Krzysztof Puszyński and Roman Jaksik: Computational model of siRNA regulation in p53 signaling pathway	85
Maciej Pyrka and Piotr Boguś: Discrete inextensible polymer chain models	91
Maciej Sobczyński and Paweł Mackiewicz: Application of self-organizing maps to description of relationship between amino acid composition of proteins and ecological properties of microorganisms	96

Piotr Szulc: The consistency of modified versions of Bayesian Information Criterion in a sparse linear regression	102
Jarosław Śmieja: On rate of appearance of glucose in blood	107
Sławomir Świrydowicz and Michał Wiktor: Increase the diagnostic efficiency of mammographic images by appropriate colouring of mammograms	113
Małgorzata Wańczyk, Paweł Błażej and Paweł Mackiewicz: Comparison of two algorithms based on Markov chains applied in recognition of protein coding sequences in prokaryotes	118
Volodymir G. Zinkovsky, Olga V. Zhuk, Grzegorz Ołoś and Maksym Zhuk: Occupational model of simultaneous action of xenobiotics on the organism and methods of analysis of their toxic effects	124
Mariusz Ziółko, Rafał Samborski, Jakub Gałka and Bartosz Ziółko: Wavelet-Fourier Analysis for Speaker Recognition	129
Part III: Abstracts of published works	
Denis Blackmore and Anatoliy K. Prykarpatsky: On the Fisher type replicator-mutator dynamical systems and their equilibrium states	137
Adam Bobrowski, Marek Kimmel and Tomasz Wojdyła: Asymptotic behavior of a Moran model with mutations, drift and recombination among multiple loci ..	139
Marek Bodnar, Urszula Foryś and Jan Poleszczuk: Analysis of biochemical reactions models with delays	140
Urszula Foryś and Marek Bodnar: Simple models of solid tumour growth	141
Michał Krześlak and Andrzej Świerniak: Spatial evolutionary games and radiation induced bystander effect	142
Zbigniew Peradzyński: Mechano-chemical effects accompanying and influencing the diffusion of calcium	144
Joanna Stachowska-Piętka and Jacek Waniewski: Modeling of osmotic transport during peritoneal dialysis	145
Piotr Szopa, Tomasz Lipniacki and Bogdan Kaźmierczak: Exact solutions to a spatially extended model of kinase-receptor interaction	146
Zuzanna Szymańska, Mark A.J. Chaplain, Mirosław Lachowicz and Dariusz Wrzosek: Mathematical modelling of cancer invasion: the importance of cell-cell adhesion and cell-matrix adhesion	147
Savas Tay, Jacob J. Hughey, Timothy K. Lee, Tomasz Lipniacki, Stephen R. Quake and Markus W. Covert: Single-cell NF-κB dynamics reveal digital activation and analogue information processing	148
Spis autorów	149
