

Table of Contents

Part I: Invited speakers

Jacek Banasiak: Singularly perturbed models in structured population dynamics	9
Tomasz Bączek: Novel analytical approaches in the evaluation and discovery of cancer biomarkers	10
Rafał Dziadziuszko, Jacek Jassem and Witold Rzyman: Biomathematical challenges in cancer research	12
Anna Marciniak-Czochra: Mathematical models of cell differentiation and tissue regeneration on example of hematopoiesis	13
Paweł Wiczling: The application of pharmacokinetics and pharmacodynamics in modern pharmacy	14

Part II: Full papers

Agnieszka Bartłomiejczyk and Henryk Leszczyński: Physiologically structured populations with diffusion	19
Krzysztof Bartoszek: The Laplace motion in phylogenetic comparative methods	25
Marta Bogdał, Beata Hat, Marek Kochańczyk and Tomasz Lipniacki: Gates to apoptosis	31
Antoni Leon Dawidowicz and Witold Mierniczek: Non-quantitative Data Analysis in Clinical Practice	37
Antoni Leon Dawidowicz and Jerzy Leszek Zalasinski: Mathematical model of water balance of arborescent plants	43
Jolanta Grala-Michalak and Katarzyna Kaźmierczak: Indices of Kraft's classes of trees in five- and ten-year period	48
Magdalena Igras, Mariusz Ziółko and Jakub Gałka: Wavelet evaluation of speaker emotions	54
Andrzej Jarynowski and Marta Klis: Socio-economic models of divorces in different societies	60
Mikhail Kolev and Boiana Garkova: The impact of the reestablishment of extracellular matrix on cancer invasion	65
Mikhail Kolev and Adam Korpusik: On the kinetic model of interactions between virus and two CTL populations	71
Tadeusz Kosztołowicz, Katarzyna D. Lewandowska, Michał Arabski and Sławomir Wąsik: The theoretical model of a released substance from a subdiffusive membrane to a diffusive environment	77
Michał Krześlak and Andrzej Świerniak: Extended game-theoretic model of interaction between tumour cells	83

Katarzyna Lewandowska and Tadeusz Kosztołowicz: The boundary condition at a partially absorbing thin membrane	90
Dominika Nowicka: Aligning amino acid sequences in context of searching homologs	94
Danuta Papaj and Krzysztof Fujarewicz: On stability and sensitivity of feature rankings for large-scale biological data	100
Monika Joanna Piotrowska, Urszula Foryś, Marek Bodnar and Jan Poleszczuk: Carcinogenesis, mutations, delay and diffusion	106
Jan Poleszczuk: Quantifying protein and mRNA levels in a single cell: problems and questions	112
Justyna Signerska: Firing map for periodically and almost-periodically driven integrate-and-fire models: a dynamical systems approach	119
Bronisław Sulkowski: Disease process as a stochastic process – modeling disease course by stochastic differential equation	125
Jarosław Śmieja and Arkadiusz Jamróz: Sensitivity analysis for biochemical models based on normalized data	130
Małgorzata Wańczyk, Paweł Błażej and Paweł Mackiewicz: Influence of mutational pressure on protein coding sequences in bacterial genomes	136
Marek Wróbel, Piotr Boguś, Anita Markowska, Bogdan Małkowski, Łukasz Bałszewski, Monika Kempnińska and Artur Kachniarz: Statistical parametric maps in identification of regional cerebral activity in PET study	142
Beata Zduniak and J.J. Żebrowski: Influence of delayed feedback on modified van der Pol oscillator	148
Volodymir Zinkovsky, Olga Zhuk, Daniel Klasinski, Maksym Zhuk, Grzegorz Ołoś and Robert Jabłocki: Methods for determining the parameters of dynamics of humanity's number in the time of demographic transition “peaks”	155

Part III: Abstracts of published works

Małgorzata Białka: Comparison between two approaches to modeling microsatellite DNA repeats: infinite dimensional model and its n-dimensional approximation	161
Joanna Chrobak, Marek Bodnar and Hennar Herrero: About a generalized stochastic model of lymphoma	162
Urszula Foryś: SICR epidemic model with impulsive vaccinations	163
Tadeusz Krasieński, Sebastian Sakowski and Tomasz Popławski: Autonomous push-down automaton built on DNA	164
Kazimierz Piechór: Calcium waves in thin domains of visco-elastic material	166
